Memory encoding/retrieval is sensitive to discourse status: through the lens of pronoun resolution

Sanghee J. Kim & Ming Xiang (The University of Chicago)

The 36th Annual Conference on Human Sentence Processing The University of Pittsburgh March 9-11, 2023

Discourse structure in working memory (WM)

• Much work on the interaction of WM and sentence comprehension in (morpho-) syntactic dependencies (Just & Carpenter (1992); MacDonald (1992); Caplan & Waters (1999); Gibson (2000); Lewis & Vasishth (2005))

How is information about discourse structure encoded and retrieved in WM?

Discourse structure in working memory (WM)

• Much work on the interaction of WM and sentence comprehension in (morpho-) syntactic dependencies (Just & Carpenter (1992); MacDonald (1992); Caplan & Waters (1999); Gibson (2000); Lewis & Vasishth (2005))

How is information about discourse structure encoded and retrieved in WM?

- "Discourse structure" focused on the division of [+ main/subordinate]
- Restrictive relative clauses (RRCs) vs. Appositive relative clauses (ARCs)
- Pronoun resolution

Discourse status of ARCs and RRCs

Discourse status of ARCs and RRCs

ARC

RRC

- Subordinate discourse structure
- Side comments; not part of the main point of the utterance (Dehé & Kavalova (2007); Asher & Lascarides (2003); Koev (2013))
- Part of main discourse structure

Information with distinct discourse status leads to different interference effects

Ng & Husband (2017); McInnerney & Atkinson (2020); Kim & Xiang (2022)

(1a) ***The former mayor** who hired **the project managers** [..] **were** upset [..].

(1b) *The former mayor, the one who hired the project managers, [..] were upset [..].

	'The former mayor'	'The project managers'	
(1a)			VERB ('were')
(1b)			

Ng & Husband (2017); McInnerney & Atkinson (2020); Kim & Xiang (2022)

(1a) *The former mayor who hired the project managers [..] were upset [..].
(1b) *The former mayor, the one who hired the project managers, [..] were upset [..].

Prediction: Number agreement attraction effect in both (1a) and (1b)

Ng & Husband (2017); McInnerney & Atkinson (2020); Kim & Xiang (2022)

(1a) *The former mayor who hired the project managers [..] were upset [..].
(1b) *The former mayor, the one who hired the project managers, [..] were upset [..].

	'The former mayor'	'The project managers'	
(1a)	[+ sg] <mark>[+ subj]</mark>	<mark>[+ pl]</mark>	VERB ('were')
(1b)	[+ sg] <mark>[+ subj</mark>]	<mark>[+ pl]</mark>	[• pt, • 300]

Absence of number agreement attraction effect in appositives (1b) *Why?*

Ng & Husband (2017); McInnerney & Atkinson (2020); Kim & Xiang (2022)

(1a) *The former mayor who hired the project managers [..] were upset [..].
(1b) *The former mayor, the one who hired the project managers, [..] were upset [..].

	'The former mayor'	'The project managers'	VERB ('were')
(1a)	[+ sg] [+ subj] [+ main]	[+ pl] [+ main]	{ + pl , + subj ,
(1b)	[+ sg] [+ subj] [+ main]	[+ pl] [+ subord.]	+ main}

Ng & Husband (2017); McInnerney & Atkinson (2020); Kim & Xiang (2022)

(1a) *The former mayor who hired the project managers [..] were upset [..].
(1b) *The former mayor, the one who hired the project managers, [..] were upset [..].

	'The former mayor'	'The project managers'	VERB ('were')
(1a)	[+ sg] <mark>[+ subj]</mark> <mark>[+ main]</mark>	<mark>[+ pl]</mark>	{ + pl , + subj ,
(1b)	[+ sg] <mark>[+ subj]</mark> <mark>[+ main]</mark>	[+ pl] [+ subord.]	+ main}
	Ť		

Different degree of partial feature match between the distractor and the retrieval cues

• Appositive structures (ARCs) show reduced processing cost in syntactically complex structures, e.g., filler-gap dependency, wh-movement (Dillon et al. (2014); Dillon et al. (2017); Kroll & Wagers (2019))

Dillon et al. (2017): Filler-gap dependency

(2a) The butcher asked who₁ the lady who₂ bought Italian ham was cooking dinner for <u>1</u>.
(2b) The butcher asked who₁ the lady, who₂ bought Italian ham, was cooking dinner for <u>1</u>.

	<i>wh</i> -filler (who ₁)	<i>wh</i> -filler (who ₂)	
(2a)			GAP { + WH + 0 }
(2b)			(· ····, · · ·

Dillon et al. (2017): Filler-gap dependency

(2a) The butcher asked who₁ the lady who₂ bought Italian ham was cooking dinner for <u>1</u>.
(2b) The butcher asked who₁ the lady, who₂ bought Italian ham, was cooking dinner for <u>1</u>.

Prediction: Processing cost in integrating the filler

Dillon et al. (2017): Filler-gap dependency

(2a) The butcher asked who₁ the lady who₂ bought Italian ham was cooking dinner for <u>1</u>.
(2b) The butcher asked who₁ the lady, who₂ bought Italian ham, was cooking dinner for <u>1</u>.

	<i>wh</i> -filler (who ₁)	<i>wh</i> -filler (who ₂)	
(2a)	<mark>[+ WH]</mark> [+ Q]	<mark>[+ WH]</mark> [- Q]	GAP ∫ + ₩H + ∩ \
(2b)	<mark>[+ WH]</mark> [+ Q]	<mark>[+ WH]</mark> [- Q]	(• •••••, • • v)

Reduced processing cost at the gap site with ARC (2b) *Why?*

Dillon et al. (2017): Filler-gap dependency

(2a) The butcher asked who₁ the lady who₂ bought Italian ham was cooking dinner for <u>1</u>.
(2b) The butcher asked who₁ the lady, who₂ bought Italian ham, was cooking dinner for <u>1</u>.

	<i>wh</i> -filler (who ₁)	<i>wh</i> -filler (who ₂)	
(2a)	[+ WH] [+ Q]	<mark>[+ WH]</mark> [- Q]	GAP { + ₩H + 0 }
(2b)	[+ WH] [+ Q]	<mark>[+ WH]</mark> [- Q]	[• ••••, • ~]

Dillon et al. (2017): Filler-gap dependency

(2a) The butcher asked who₁ the lady who₂ bought Italian ham was cooking dinner for <u>1</u>.
(2b) The butcher asked who₁ the lady, who₂ bought Italian ham, was cooking dinner for <u>1</u>.

	<i>wh</i> -filler (who ₁)	<i>wh</i> -filler (who ₂)	GAP
(2a)	[+ WH] <mark>[+ Q]</mark> [+ main]	<mark>[+ WH</mark>] [- Q] <mark>[+ main]</mark>	{ + WH, + Q,
(2b)	[+ WH] <mark>[+ Q]</mark> [+ main]	<mark>[+ WH]</mark> [- Q] [+ subord.]	+ main}
	ţ		

Different degree of partial feature match between the intervening *wh*-word and the retrieval cues

Key takeaway of empirical findings

• At least for these two empirical cases, information contained in the subordinate discourse unit (ARC) does not introduce an interference effect whereas information contained in the main discourse unit (RRC) does

Key takeaway of empirical findings

• Suggests that discourse structure information is encoded as a feature and is used as a retrieval cue: [+ main], [+ subordinate]

'The former mayor'	'The project managers'	VERB ('were')
[+ sg] <mark>[+ subj]</mark> <mark>[+ main]</mark>	<mark>[+ pl]</mark> [- subj] <mark>[+ main]</mark>	{ + pl, + subj,
[+ sg] <mark>[+ subj]</mark> <mark>[+ main]</mark>	[+ pl] [- subj] [+ subord.]	+ main }

- Previous work: Representation of discourse structure information in WM leads to a retrieval interference effect
- Current work: Encoding interference effect triggered by discourse structure information features

Key properties of our test case

- 1) Discourse structure information is not part of the retrieval cue
- 2) Discourse structure information features are encoded on retrieval targets

(3) The violinists, who admired the singers, invited **their** mentors to the party.

- 'The violinists' (main) & 'The singers' (subordinate) ambiguous antecedent
- While the two NPs are part of different discourse structures, both NPs are available for pronoun resolution (AnderBois et al. 2015)
- Key contrast from previous cases (e.g., number agreement attraction):
 - Both NPs are grammatically possible antecedents for retrieval despite the distinction in discourse structure information

(4a) The violinists who admired the singers invited their mentors [..]
(4b) The violinists, who admired the singers, invited their mentors [..]

	'The violinists'	'The singers'	-
(4a)	[+ pl, + main]	[+ pl, + main]	Pronoun ('their')
(4b)	[+ pl, + main]	[+ pl, + subordinate]	[' []
			L

1) No retrieval cue directly associated with discourse structure information

(4a) The violinists who admired the singers invited their mentors [..]
(4b) The violinists, who admired the singers, invited their mentors [..]

	'The violinists'	'The singers'	-
(4a)	[+ pl, + main]	[+ pl, + main]	Pronoun ('their')
(4b)	[+ pl, + main]	[+ pl, + subordinate]	[' phj
	1	I	

2) Discourse structure information feature is encoded

(4a) The violinists who admired the singers invited their mentors [..]
(4b) The violinists, who admired the singers, invited their mentors [..]

	'The violinists'	'The singers'	-
(4a)	[+ pl, + main]	[+ pl, + main]	Pronoun ('their')
(4b)	[+ pl, + main]	[+ pl, + subordinate]	[' phj

Would feature overlap of discourse structure information during encoding lead to encoding interference effect?

Encoding interference effect

- Feature overlap during encoding leads to degraded representation of items in WM (Lewis & Vasishth (2005); Oberauer & Kliegl (2006); Vasishth et al. (2017); Rich & Wagers (2020); cf. Parker & Konrad (2020))
- Villata et al. (2018): Italian relative clause (also see Rich & Wagers (2020))
 - o (a) The dancer-**FEM** that the waiter-**FEM** has surprised [..]
 - o (b) The dancer-**FEM** that the waiter-**MASC** has surprised [..]
 - Gender feature was not a retrieval cue on the verb
 - Gender feature overlap led to processing cost on the verb: (a) > (b)

	'The violinists'	'The singers'	
(4a)	[+ pl, + main]	[+ pl, + main]	Pronoun ('their')
(4b)	[+ pl, + main]	[+ pl, + subordinate]	[· Þ••]

More feature overlap in (4a)

	'The violinists'	'The singers'	
(4a)	[+ pl, + main]	[+ pl, + main]	Pronoun ('their')
(4b)	[+ pl, + main]	[+ pl, + subordinate]	[' [[]

Prediction

Feature overlap of discourse structure information of possible antecedents leads to processing cost in pronoun resolution

Processing cost at pronoun ('their'): (4a) > (4b)

Clause	Sentence
RRC	The / <mark>violinists</mark> / who / admired / the / <mark>singers</mark> / invited / their / mentors / to / the / party.
ARC	The / violinists, / who / admired / the / singers, / invited / their / mentors / to / the / party.

Self-paced reading task (critical region ('their'))

Clause	Sentence	Discourse status of antecedents
RRC	The / <mark>violinists</mark> / who / admired / the / <mark>singers</mark> / invited / their / mentors / to / the / party.	[+ main], [+ main]
ARC	The / violinists, / who / admired / the / singers, / invited / their / mentors / to / the / party.	[+ main], [+ subord.]

RT: RRC > ARC @critical region ('their') Feature overlap – degraded representation

Medial	ARC	The / violinists, / who / admired / the / singers, / invited / their / mentors / to / the / party.	[+ main], [+ subord.]
Final	RRC		[+ main], [+ main]
Final	ARC		[+ main], [+ main]

RC- Position	Clause	Sentence	Discourse status of antecedents
Medial	RRC	The / <mark>violinists</mark> / who / admired / the / <mark>singers</mark> / invited / their / mentors / to / the / party.	[+ main], [+ main]
Medial	ARC	The / violinists, / who / admired / the / singers, / invited / their / mentors / to / the / party.	[+ main], [+ subord.]
Final	RRC	The / singers / admired / the / violinists / who / invited / their / mentors / to / the / party.	[+ main], [+ main]
Final	ARC	The / <mark>singers</mark> / admired / the / <mark>violinists</mark> , / who / invited / their / mentors / to / the / party.	[+ main], [+ main]

Self-paced reading task (critical region ('their'))

RT: RRC ≈ ARC @critical region ('their') The same degree of feature overlap within these two conditions

Final	RRC	The / singers / admired / the / violinists / who / invited / their / mentors / to / the / party.	[+ main], [+ main]
Final	ARC	The / <mark>singers</mark> / admired / the / <mark>violinists,</mark> / who / invited / their / mentors / to / the / party.	[+ main], [+ main]

• Native English speakers (n = 104); 32 target items & 20 fillers

- Forced antecedent choice task (e.g., "Who do you think 'their mentors' refer to?")
 - (a) the singers(b) the violinists
 - (c) someone else not mentioned in the sentence

Sentence-medial RC

The violinists who admired the singers invited **their** mentors to the party. The violinists, who admired the singers, invited **their** mentors to the party.

Sentence-medial RC

The violinists who admired the singers invited **their** mentors to the party. The violinists, who admired the singers, invited **their** mentors to the party.

The singers admired the violinists who invited **their** mentors to the party. The singers admired the violinists, who invited **their** mentors to the party.

The singers admired the violinists who invited **their** mentors to the party. The singers admired the violinists, who invited **their** mentors to the party.

RRC > ARC when RC is sentence-medial position; RRC ≈ ARC otherwise

- @Critical ('their'): 2-way interaction, *b*=0.129, *se*=0.025, *t*=5.128
- @Spillover ('mentors'): 2-way interaction, *b*=0.094, *se*=0.029, *t*=3.233

Reading times: summary

	Condition	Possible antecedent 1	Possible antecedent 2	
a)	Medial-RRC	[+pl., + main]	[+pl., + main]	
b)	Medial-ARC	[+pl., + main]	[+pl., + subord.]	
c)	Final-RRC	[+pl., + main]	[+pl., + main] Cor	ntrol
d)	Final-ARC	[+pl., + main]	[+pl., + main] con	ditions

Processing cost (RTs) as predicted

RT: (a) > (b) feature overlap
 degraded representation of the antecedents
RT: (c) ≈ (d) same degree of feature overlap

Antecedent choice preference data does not offer an alternative explanation for the RT data

Discussion and conclusion

- Previous work: Discourse structure information serves as *retrieval* cues and leads to a retrieval interference effect
- Current work: *Encoding* interference due to overlap of discourse structure information features
- Ongoing: visual world paradigm (eye-tracking) on the same phenomenon

Discussion and conclusion

- General understanding of what features serve as encoding and retrieval features in WM
 - Number, gender, case, structural constraint, animacy, semantic fit, etc.
 - Discourse structure information also serves as encoding and retrieval features

Acknowledgment

We are grateful for the generous funding support from the NSF DDRI-LING Grant (BCS-2214437).

We appreciate the UChicago Language Processing Lab members, Chris Kennedy, and Jennifer Arnold for discussions at different stages of this project.

We thank the anonymous reviewers for their feedback and comments.

Thank you for listening!
